

QUICK RELEASE COUPLING STEERING WHEEL BI

Brand: **Krontec**

Product Code: **QR-03-3B-22P**

QUICK RELEASE COUPLING STEERING WHEEL BI

LATEST VERSION of the tried and tested true ZERO "slop" steering quick release SET (2 pieces) WITH 22 PIN ELECTRICAL CONNECTORS.

Few parts in the motorsport industry are really revolutionary - but this one is definitely the market leader and it just got better!

The boss accepts any steering wheel with 3 BOLT HOLE Pattern, with 6 bolt hole on the steering column side with 22 pin electrical/data connections fitted.

The added features of this new version is larger internal parts, without any increase on the overall external dimensions, and this change permits the use of a 22 pin Deutsch German electrical connector (SEE PART# QR-03-3B-22P), all at a VERY competitive price.

We have some customers who have stated they only need 6 or 11 pin connections, we still recommend this (QR-03-3B-22P) version as it is much cheaper than the older version with electrical connector. Since when you order the version with electrical connectors installed (QR-03-3B-22P) the pins and sockets are not fitted (you fit them to suit your electrical requirement), you can install only the number of pins required - and it is still cheaper than any other option.

This part number (QR-03-3B) is without the electrical connector.

This coupling is unique in many ways. Splined products do not offer zero "slop" movement, and suffer from wear issues and they age, becoming sloppy. Most brands also don't index the wheel so it is straight when you click it on, and as well, they do not give you a positive lock indication so you know the wheel is in fact securely locked on the car. With this product you can forget all of these issues, it just works, and very well at that!

The Krontec steering coupling system is completely different. This part number has a Bolt-On Boss where you can mount it to the bolt

pattern on your steering column. You can see other options in our site - such as weld on bosses. We can even supply the couplings with Professional German electrical connectors fitted, allowing your data to be neatly passed through the coupling point and avoid ugly and cumbersome cables.

The Male portion of the boss is both tear-shaped and tapered depth-wise. This coupling centers the steering wheel perfectly and glides on with absolute ease, whilst providing complete confidence your steering wheel is 100% locked and cannot come off unintentionally.

One of the most critical components to your vehicle is the steering components, can you afford to be without our solution - we believe not!
